Commitment Details

Commitment Name
Algorithm triggered multidisciplinary perioperative management to optimize patient outcomes

Participants
Michael Gnant
Sharok Shariat
Heinz Koelbl
What Patient Safety Challenge does your Commitment address?  
How Many Hospitals Will This Commitment Represent  
1

Commitment Summary  
Operative treatment has changed rapidly over the last decades. Today even severely compromised patients can undergo surgical treatment. Internal, surgical and anesthesia risk factors have an impact on each patient's individual perioperative risk.

Commitment Description & Detail  
We created an algorithm to optimize the perioperative interfaces of the interdisciplinary process. The algorithm emphasizes clinical indications, required diagnostic and treatment steps and trigger points for interdisciplinary patient care. Flow of information and decision points are precisely defined. Required preoperative and surgical skills are trained in an interdisciplinary setting.

Action Plan  

Commitment Timeline  
Milestone 1 should be completed in 2014, Milestone 2 should be completed in 2015.
