How Many Hospitals Will This Commitment Represent
1

Commitment Summary

Patient Safety Movement Foundation | patientsafetymovement.org
Our commitment is to reduce hospital-acquired conditions (HAC's) focusing on Clostridium difficile infections and central blood stream infections (CLABSI). These were chosen because they were identified by our Quality Committee as priorities due increasing numbers, the impact on patients, increasing costs of care and a belief that vigorous application of evidence-based practices would result in substantial improvement.
