Action Plan
To achieve this goal we will develop a plan based in Patient safety Education, Patient Safety publications, Protocol Development, Success Reporting, and Hospital engagement. -Patient safety education: Anesthesia Patient Safety Course (twice a year), Crisis Resource Management simulation courses (12 Editions/yr) -Patient Safety publications: SENSAR yearly report, Incident and analysis report (Spanish Anesthesia and Reanimation Journal) every 4 months. SENSAR Anesthesia Crisis Book. -Protocol Development: Serious Adverse Event Protocol, Spanish patient Safety Sedation Standards -Success Reporting: Yearly prices to hospitals actively reporting in the SENSAR incident reporting system. -Hospital engagement: Patient safety lectures provided by SENSAR experts in every hospital to be
Commitment Update
We have 102 active hospitals in our network participating in our education, innovative and learning programs. During 2017, 60 Hospitals have actively reported 1,163 incidents that have produced 2,255 corrective measures locally. Overall, SENSAR has registered more than 8,000 incidents that have been an opportunity for more than 12,000 corrective measures to be implemented since 2009. SENSAR Published a Crisis Manual for Anesthesia and critical patient that have been distributed in 11 speaking countries up to 7,150 copies. These manuals are meant to hung at the anesthesia machine and to be used during crisis to enhance team performance. SENSAR has performed different education programs in coalition with our partners that have engaged more than 1,000 health care givers. These courses have targeted patient safety culture, incident reporting and analysis, crisis resource management, interdisciplinary team performance, and serious adverse event management with compassion, transparency and second victim care. SENSAR has also developed a innovation program with 5 projects: 1- A new Incident reporting and analysis web application: PITELO, that it’s been launched during 2017 and it is ready to be translated to different languages to spread the learning culture eventually. 2- A Zero harm seal to acknowledge those hospitals that are active in implementing patient safety in their preoperative setting. 3- A Health care professional patient safety app to help managing crisis, support incident reporting and other patient safety tools. 4- A 3D education program in Patient Safety. 5- A program for patient self-empowerment regarding Patient Safety when facing surgery.

Other
Challenge 1 - Culture of Safety

Please describe any best practices your organization has learned through your commitment and share valuable lessons or challenges that were overcome
During 2017, 60 Hospitals have actively reported 1,163 incidents that have produced 2,255 corrective measures locally. Overall, SENSAR has registered more than 8,000 incidents that have been an opportunity for more than 12,000 corrective measures to be implemented since 2009. We find challenges in the continuation of local leaders and management commitment in several hospitals that have led to their decay in incident reporting. To tackle that we have started a rescue program with reduction in education fees for new local patient safety leaders. Also, our activity has grown as much as to move from a voluntary organization to a more professionalized one but incomes are yet insufficient to take that movement.
