Commitment Name
Challenge 8B: Preventing Unplanned Extubations

What Patient Safety Challenge does your Commitment address?
Challenge 8B - Unplanned extubation

Commitment Start Date
01/01/2018

How Many Hospitals Will This Commitment Represent

Patient Safety Movement Foundation | patientsafetymovement.org
Action Plan
Unplanned extubations have been tracked in the Neonatal ICU (NICU) since 2008. This is reported to the unit for tracking and intervention. Interventions have included elimination of inline suctioning, standardized ET tube holder, bedside safety practices such as two providers for high risk procedures such as suctioning, linen change, chest X-ray. A nursing project focused on unplanned extubations in the NICU population--findings indicated standardized roles and communication would be valuable; subsequent implementation of these practices has occurred. Housewide, a standardized ET tube holder has also been implemented, with isolated exceptions. Investigation is underway to determine if an EMR core data set from Epic is available for analysis and performance improvement. Data on unplanned extubations are also entered into our incident reporting system for review by Respiratory Care for trends. A difficult airway algorithm is in development to identify patients with known difficult airways. This year 15 additional ventilators were purchased with wave form capnography.
