Action Plan
Central line associated blood stream infections represent a dangerous and preventable infection. Standard practices for insertion, maintenance, and removal are crucial to preventing these events.

Commitment Update
Progress in 2018 includes: * Identifying high-risk areas and establishing dressing-change teams * Standardized practice for dressing changes * Implemented blood-culture collection policy to decrease collections from central lines, a maintenance practice known to prevent infections
**Other**

Challenge 2F - Central Line-associated blood stream infections (CLABSI)

Please describe any best practices your organization has learned through your commitment and share valuable lessons or challenges that were overcome. Standardized practices across our system, including dressing changes and blood collection, have reduced these infections.
